Team 6
Woah!Woah! Woah!

Lowering passengers' stress through managing the crowd and revitalising unused spaces in the transition stages by providing interactive and dynamic AR-based spaces.

Rest is often underrated in our society, even though our bodies need downtime to recover and restore balance. Every person has a different pace, but in the MTR everything is rushed. What they would need is an opportunity and a driver to slow down without disrupting their trips or anybody else's. For this reason, we propose a dynamic model which makes the MTR experience less stressful offering interactive experience with AR features.

What is the Solution ?

A dynamic system that makes the MTR station experience less stressful by slowing them down and offering interactive incentives with AR experiences.

EXPERIENCE Is What Matters

MAGICAL FOREST

Give a sense of calmness while educating of greeneries
